Lab 3

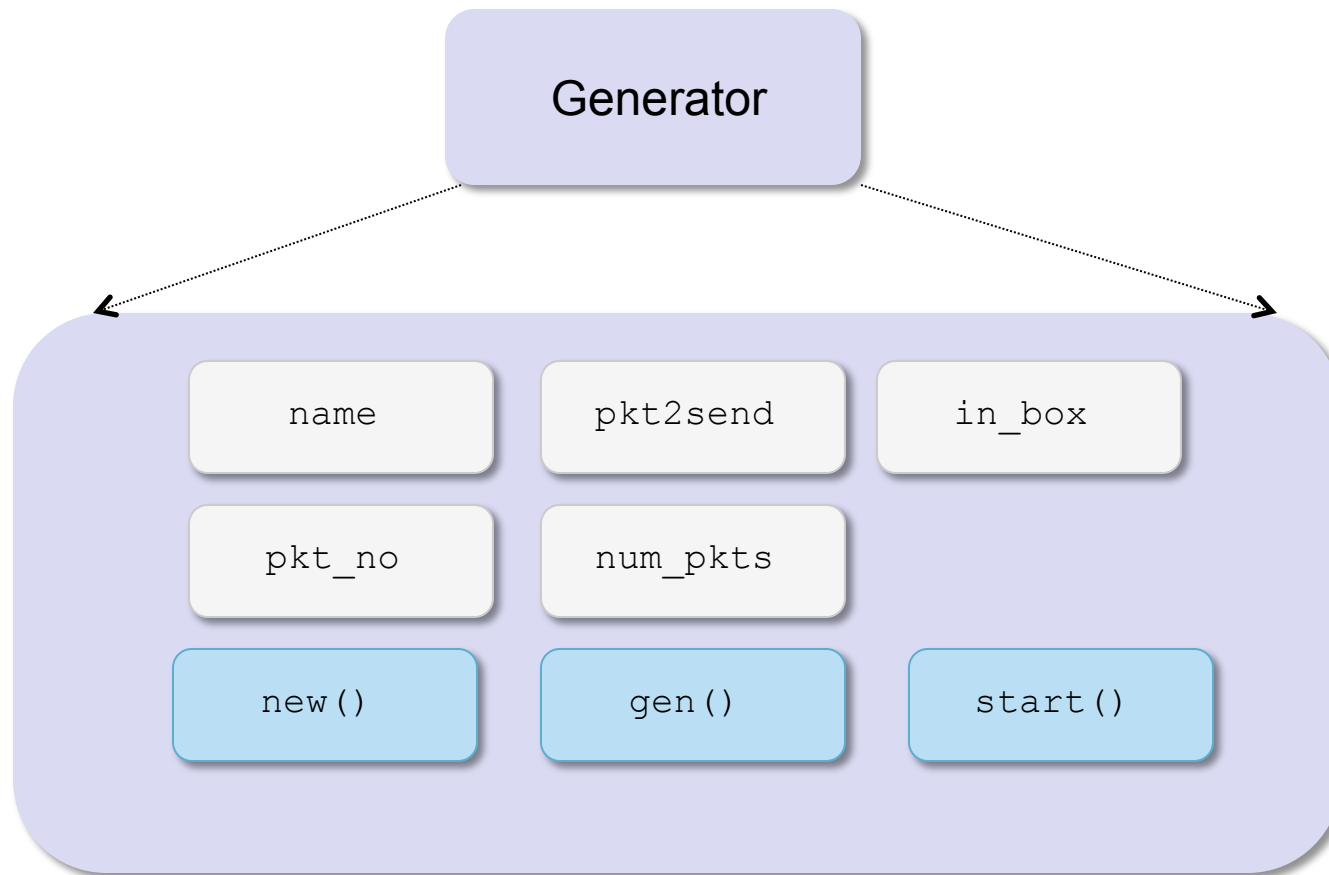

Fall 2009
Dr. Meeta Yadav

Topics

- Generator and Driver Overview
- New features introduced in the lab

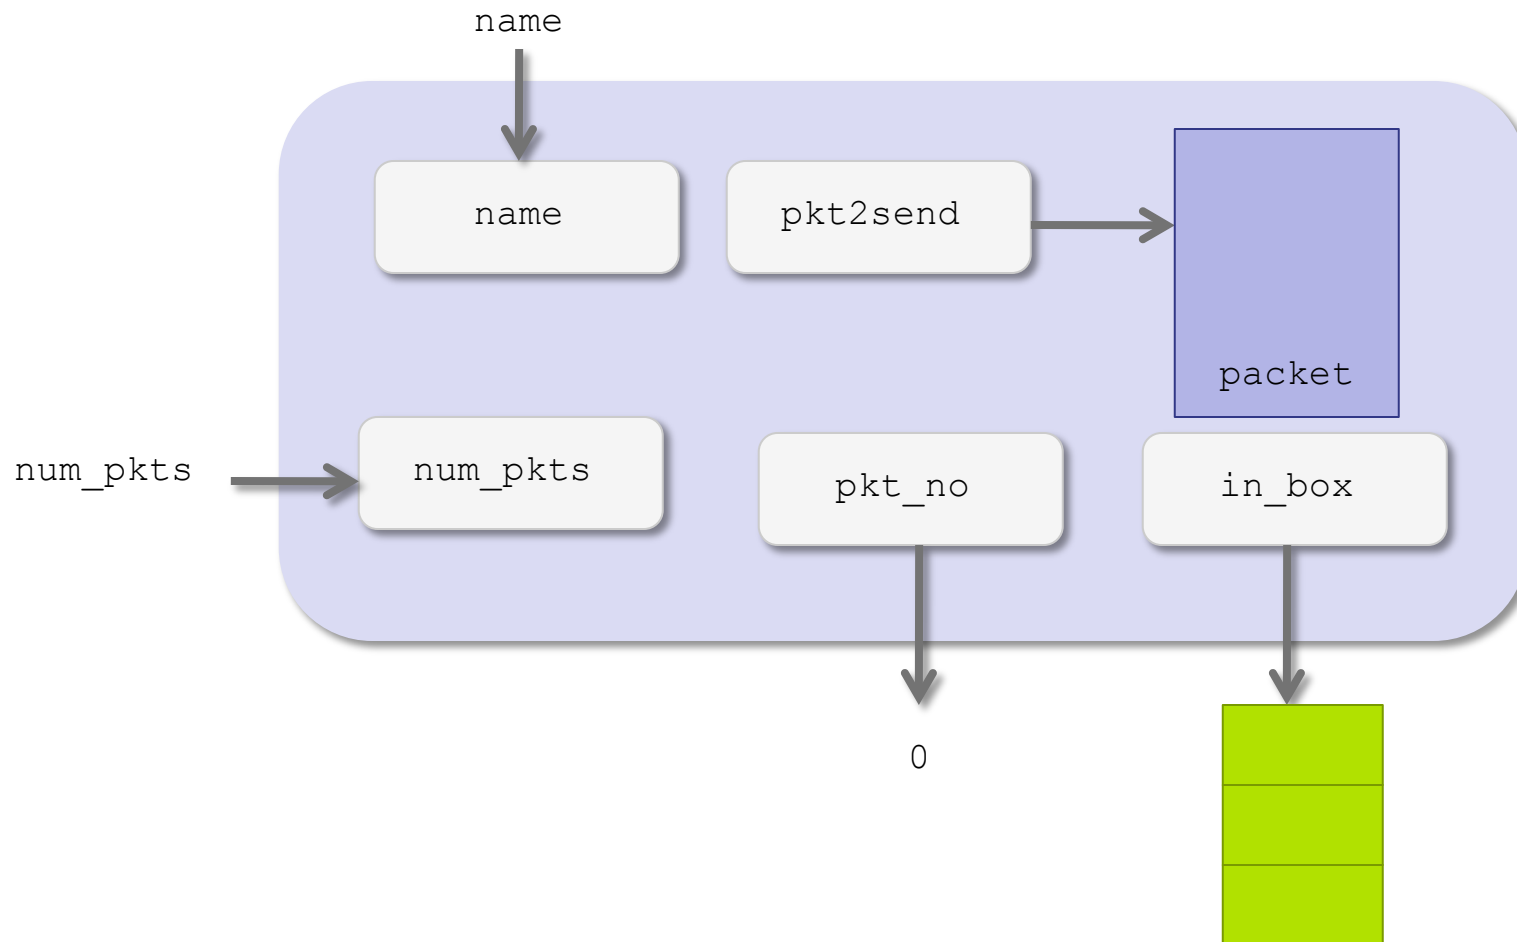

Generator

- Generator

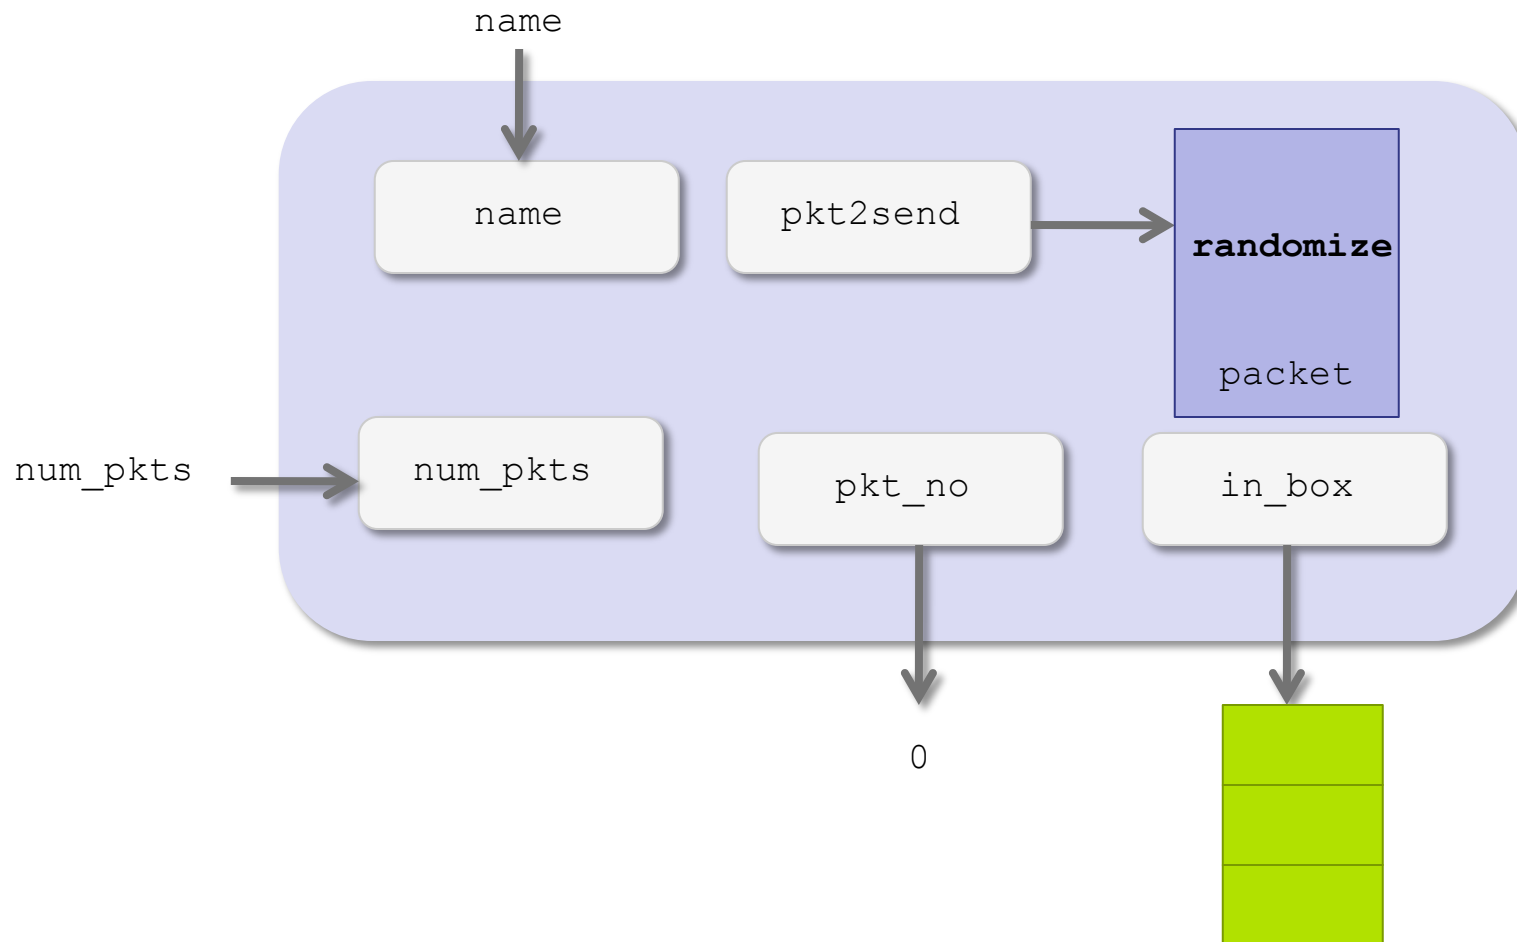

Generator

- Generator: new()

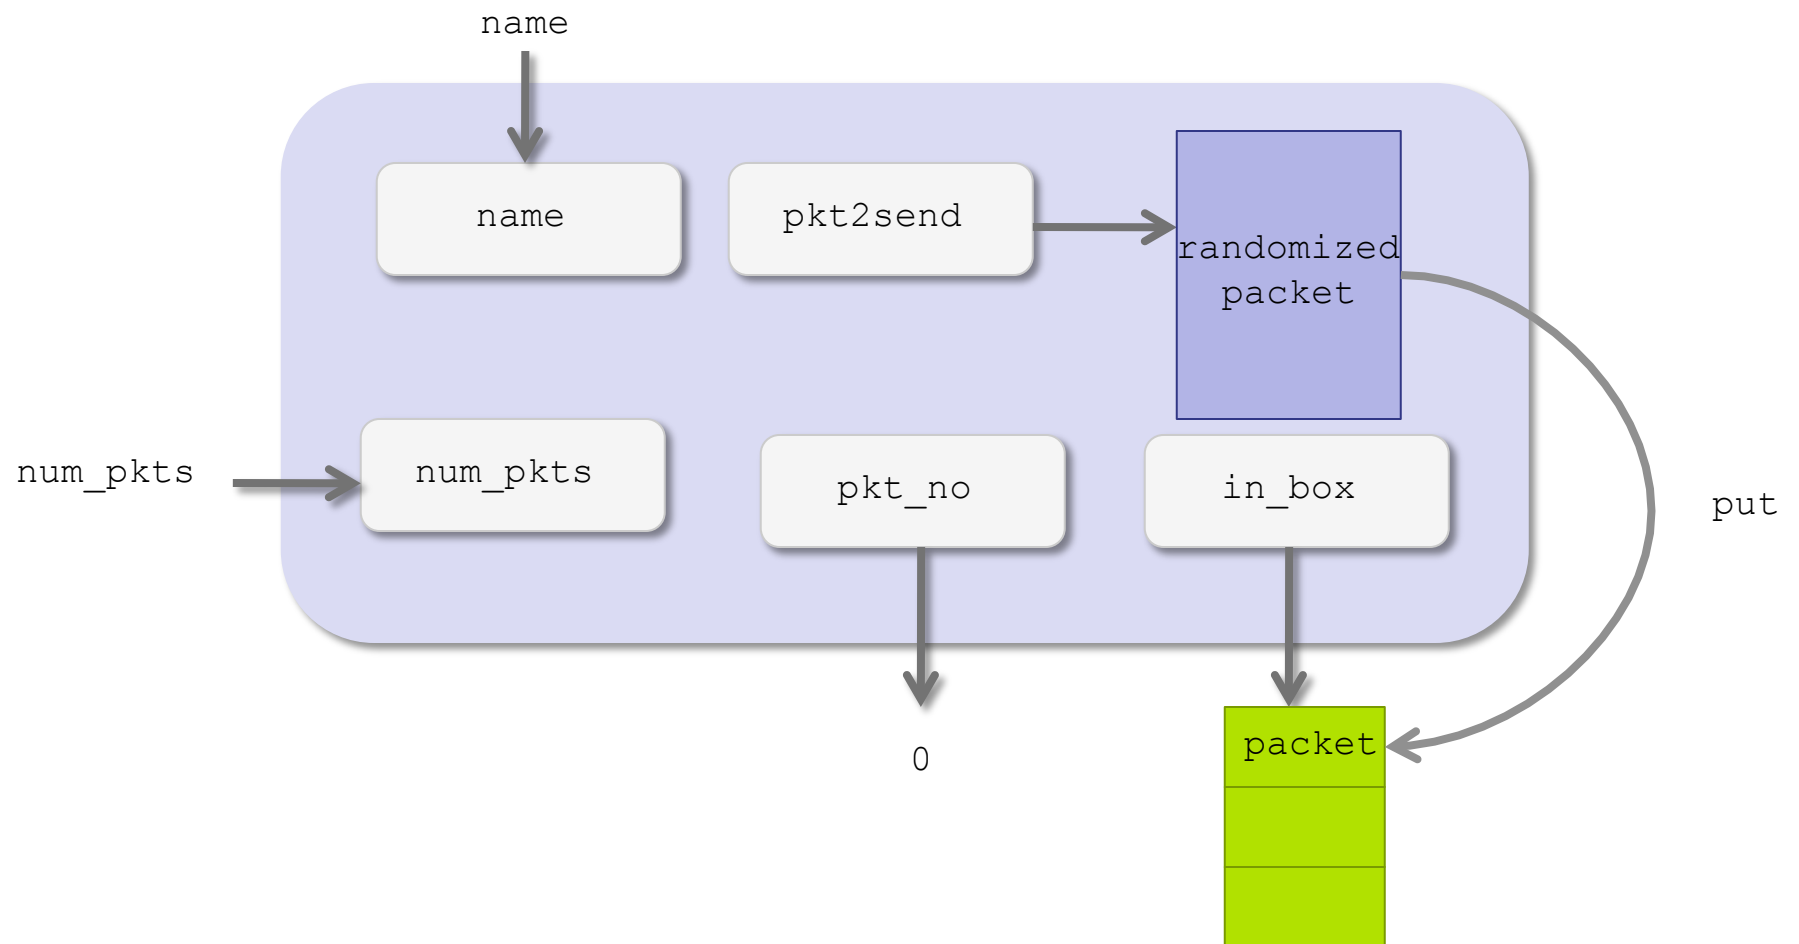

Generator

- Generator: `gen()`

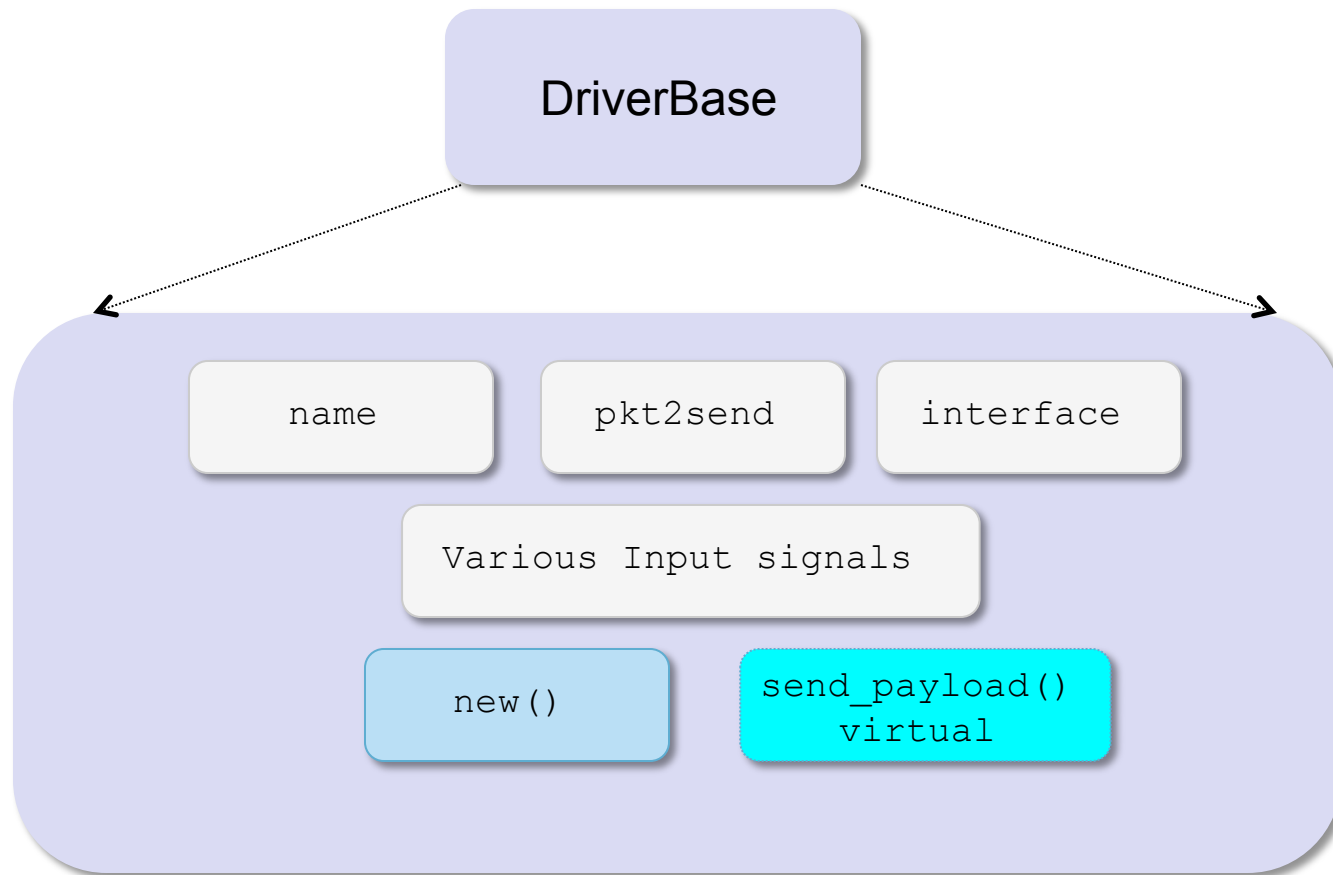

Generator

- Generator: start()

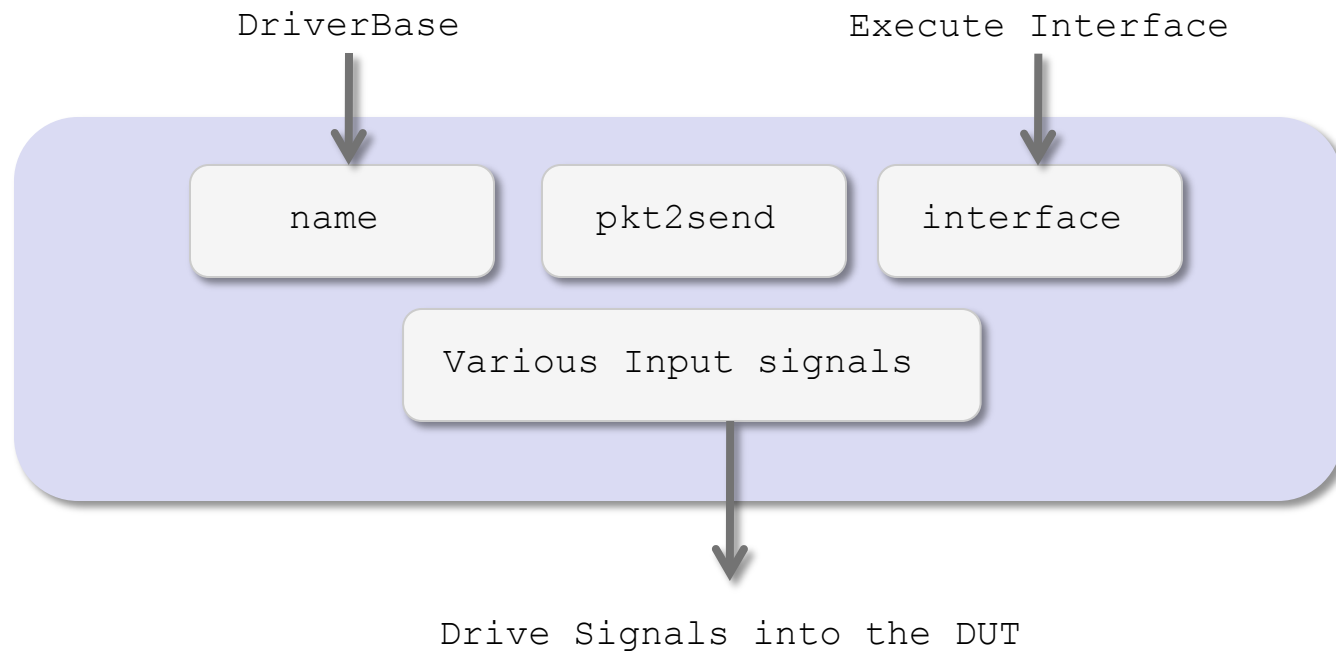

DriverBase

- DriverBase

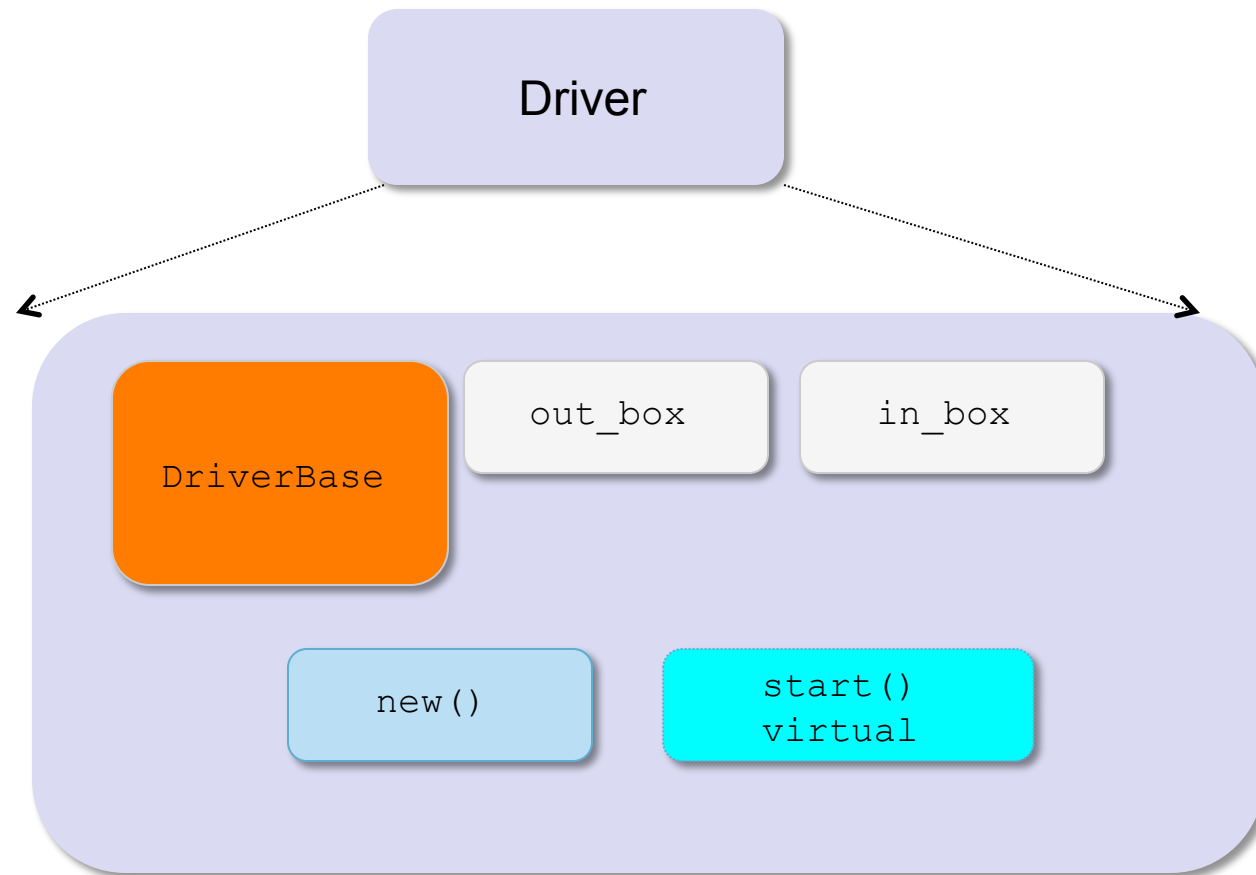

DriverBase

- DriverBase: new ()

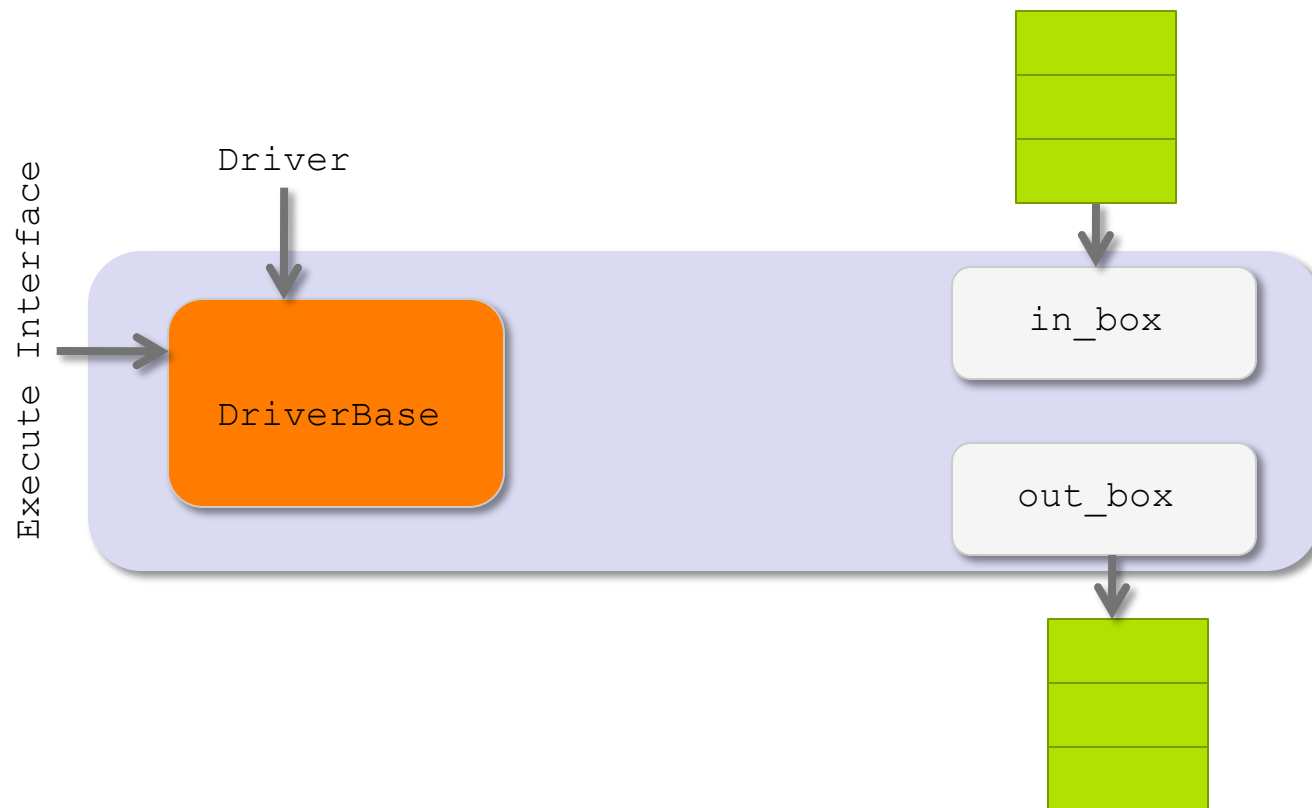

Driver

- Driver extends DriverBase

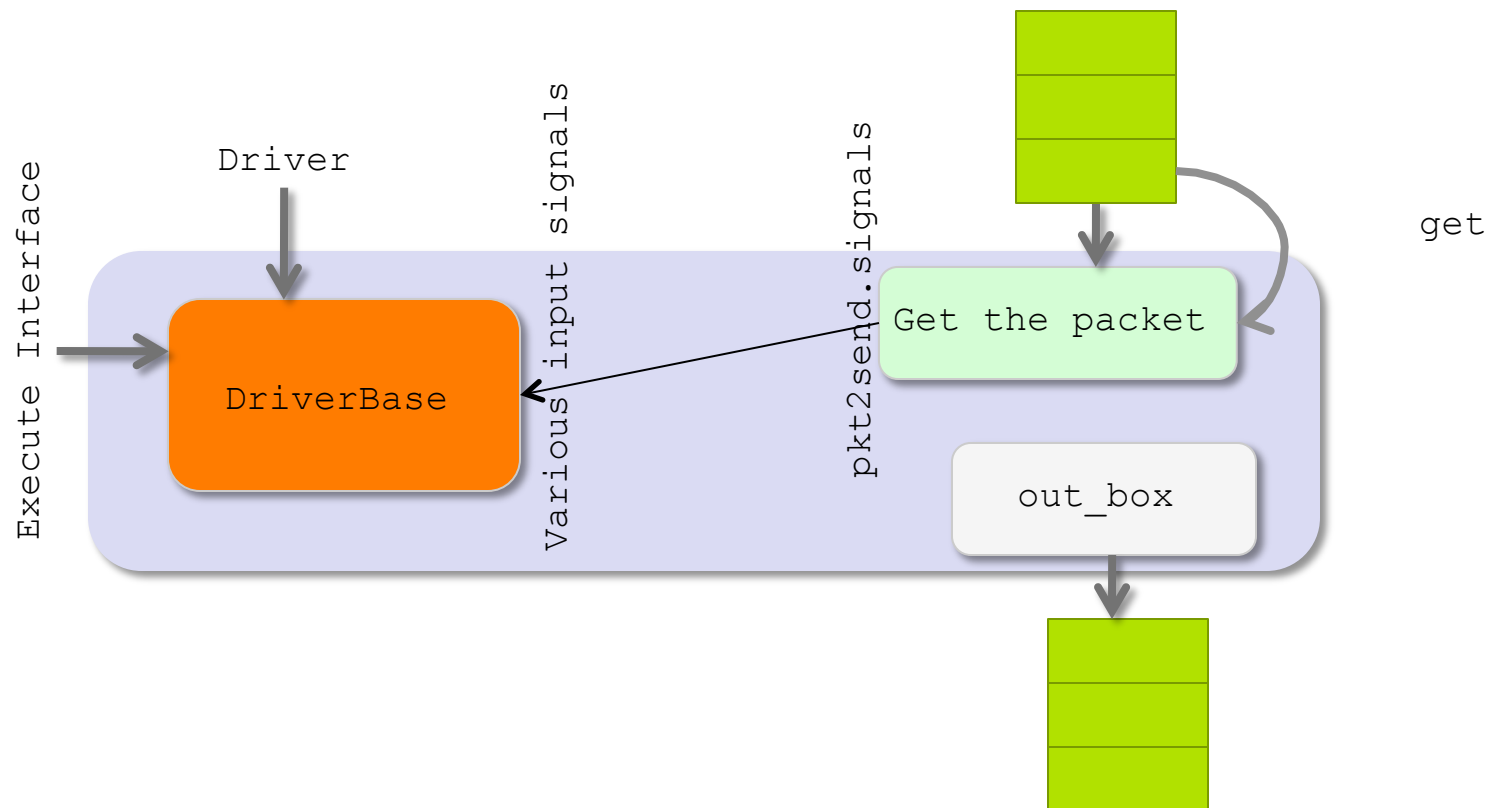

Driver

- Driver: new()

Driver

- Driver: start()

New Things in Lab

- Parameterized Mailboxes

- To tie a mailbox to transfer only one kind of data

```
typedef mailbox #(Packet) in_box_type;  
In_box_type in_box;
```

in_box

Can only transfer handles of
Packet class

New Things in Lab

- **extern**
 - Allows you to move method definitions outside the body of the class declarations

```
class Generator
...
extern function new (...)
...
endclass    in_box

function Generator::new(...)
```

New Things in Lab

- **new () function in the extended class**
 - If the base class constructor has any arguments the constructor in the extended class must have a constructor and must call the base constructor on its first line

```
class Driver extends DriverBase
...

function Driver::new (string...)
    super.new(name, Execute);
```

New Things in Lab

- Virtual Interface

- Virtual interfaces provide a mechanism for separating abstract models and test programs from the actual signals that make up the design.
- A virtual interface allows the same subprogram to operate on different portions of a design, and to dynamically control the set of signals associated with the subprogram.
- Instead of referring to the actual set of signals directly, users are able to manipulate a set of virtual signals.
- Changes to the underlying design do not require the code using virtual interfaces to be re-written.
- By abstracting the connectivity and functionality of a set of blocks, virtual interfaces promote code-reuse
- Can be passed as arguments to task and functions

```
virtual Execute_io.TB Execute
```

New Things in Lab

- Virtual Interface
 - Virtual interfaces is a handle or a pointer to the physical interface
 - Must be initialized

Thank You
